

Esri Field maps allows users to collect line and polygon geometry in 3 ways.

1. **Vertex logging**
2. **Streaming (time or distance)**
3. **Digitize**

These settings can be configured under the **Profile icon** and are located under **Collection Settings** menu. For **vertex logging**, users can choose **single shot** or **averaging** to log the positions. For **Streaming (or continuous logging)** the user can choose between a **time or distance interval**.

When you create a new line or polygon you have the option to log a vertex using **Add Point** or to **Start Streaming** using the 3 dots icon on the middle right side of the application. You can start/stop streaming as needed.
